PDEA's College of Engineering
Department of Mechanical Engineering
SEMINAR ON Entrepreneurial decision-making
ACTIVITY REPORT

Title of Activity	One day PDEA's College of Engineering seminar on "Entrepreneurial decision-making." organised by Department of Mechanical Engineering PDEA's College Manjari (Bk) Pune.
Venue	Mechanical Seminar Hall
Date & Time	10 th of Feb 2023, 11.00 am
Resource person	Mr.Dadashri Kamathe ,Padmavati Industries

Objective:

- **knowledge about various laws that protect owners of "Entrepreneurial decision-making."**
- **Mostly in the form of Entrepreneurial.**

Time	Particulars
10.45 am to 11.00am	Welcome and Introduction of resource person By Department of faculty Prof. S A Patil
11.02 am to 12.15 am	Introduction "Entrepreneurial decision-making."
12.15 am to 12.30 pm	Question & answer session
12.30 pm	Vote of thanks

Description of the activity:

- The seminar began on a formal note by lighting of lamp in online mode followed by introduction of resource persons from Staff of Department of Mechanical Engineering
- Mr.Dadashri Kamathe delivered lecture on Introduction Entrepreneurial decision-making
- The seminar presentation was followed by an interactive session
- Feedback was obtained from the participants/delegates.

Outcome of the activity:

- Highlighting salient aspects of Entrepreneurial decision-making
- Imparting awareness about Entrepreneurial decision-making

Activity experience:

a. Outcome wise description of observations/explanations:

Students and faculty appreciated the initiative and participated actively in the seminar.

b. The concept/principles/procedures learnt as the result of activity:

The faculty and students were made aware about Entrepreneurial decision-making

c. Application of observation/experience in professional life/work:

The faculty and students would benefit by aiming Entrepreneurial

d. Summary & conclusion:

Total: faculties and students participated actively in the seminar and gained an insight into the various aspects of Entrepreneurial decision-making

9. Assessment of the activity outcomes:

The overall activity has been well received by the faculty and students.

Subject:- Hydrogen Fuel & Its Application for EVs

As per above reference subject I am prof.shirsath S S from mechanical Engineering department going to organize one day Seminar on **Hydrogen Fuel & Its Application for EVs** for mechanical engineering students with CAD/CAM guru institute on 27 th of August 2022 at 11:00 am . CAD/CAM guru institute is very well known institute and we recently sign MOU with this institute for exchange the knowledge between student, faculty and this institute.

So I requested to please give the permission for this program,

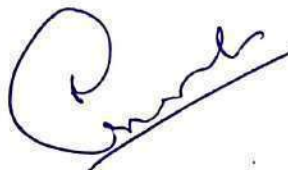

content of the Our Session aims to cover the following points: (Duration -1 hr)

Technical topic:

- Why Hydrogen? Its advantages
- What is Green Hydrogen production
- Green Hydrogen - Govt. Policy
- Uses of Hydrogen so far
- Using Hydrogen for transport sector
- Challenges: FCEV passenger cars versus battery EV cars
- FCEV, a promising option for heavy vehicles

Please for n.a.

Kind Attention: Principal and HoD -Mechanical Sir,

Dear Sir,

Greetings from CADCAMGURU, Pune!

CADCAMGURU is a pioneer in CAD and CAE job oriented training with over 24 years of presence in the State.

With immense expertise in providing industry skills relating to Mechanical and Industrial Automation, CADCAMGURU also leads a lot of initiatives to provide job opportunities to its students.

In the last two years, despite the pandemic, CADCAMGURU has provided placement to more than 600 students in the core domain area of CAD /CAE applications. We are also committed to create awareness among all Engineering college students about the current industry opportunities and additional skills needed to match the industry expectations.

As discussed, we would like to propose a Seminar /Expert Guest lecture in your college for your Mechanical TE & BE students by our Industry Expert Mr. Anand Thakar who has more than 37 years of Industry Experience. (You may kindly refer to his brief profile attached with this e-mail.)

Topic : Hydrogen Fuel & Its Application for EVs

Our Session aims to cover the following points: (Duration -1 hr)

1. Technical topic:

- Why Hydrogen? Its advantages
- What is Green Hydrogen production
- Green Hydrogen - Govt. Policy
- Uses of Hydrogen so far
- Using Hydrogen for transport sector
- Challenges: FCEV passenger cars versus battery EV cars
- FCEV, a promising option for heavy vehicles

2. Industry expectations from Mechanical design engineers:

- Additional Skill development ideas for TE, BE students
- Current industry expectations, types of job opportunities available

Looking forward to your Seminar day and time confirmation for proceeding!

Warm regards,

Team CADCAMGURU Seminars

COEM/MBA/2022-23

Date: 11th Aug. 2022

To

Shri Vijaykumar H. Khasnis,
Associate V. P. - CDFD (Engg.)
Bharat Forge Limited, Pune

Reg.: Invitation to conduct a "Guest - Lecturer" in our College.

Respected Madam,

It gives a great pleasure to introduce us with your esteemed organisation. We are an affiliated Institute of Savitribai Phule Pune University. Our parent trust **Pune District Education Association** is working in the field of Education since last 40 years and is headed by Hon. Ex-Deputy Chief Minister (Govt of Maharashtra) Shri. Ajit Dada Pawar.

We are engineering and Management Institute affiliated to Savitribai Phule Pune University and are operating since 1998. This is to invite you for an Expert Lecture to our students on the topic related to your field of expertise, i.e. on "Simulation Technique used in Bharat Forge".

This is to request you to inform us the suitable date and time in the coming week or fortnight, so that we can make arrangements for the same, expecting a positive response.

Sincerely Yours,

For PDEA's College of Engineering,

(Head of Department - MBA)

Head of Department-M.B.A.
Pune District Education Association's
College of Engineering, Pune.

COEM/MBA/2021-22

Date: 18/08/2022

To,

Shri. Vijaykumar H. Khasnis,
Associate V. P. - CDFD (Engg.)
Bharat Forge Limited, Pune

Letter of Appreciation

On behalf of the PDEA's College of Engineering, Manjari (Bk.), I would like to extend our most heartfelt thanks and the appreciation for being our Expert Guest Lecturer on 18th February 2022 on the topic "Simulation Technique used in Bharat Forge". Your attendance to the said event made it more meaningful and memorable for us and our students.

Thank you for sharing us part of your valuable time and the great experience. The insights you shared to the students and everyone present during the activity was informative and inspiring. It reminded us all to give our best in everything we do even if we feel that we may not be repaid or recognized for our effort.

Thank you again and we expect the same cooperation in future.

Respectfully,

For PDEA's College Engineering,

(Prof. A. S. Deshpande)

Head of Department-M.B.A.
Pune District Education Association's
College of Engineering, Pune.

Principal
Pune District Education Association's
College of Engineering Manjari (Bk.),
Pune - 412307.

FIRST YEAR ENGINEERING DEPARTMENT

COEM/FE/2022-23/ 1103A

Date :- 12-11-2022

To,

The Principal,
College of Engineering,
Manjari Bk. Pune 412307.

Sub :- Regarding the conduction of Orientation & Induction Programme for FE Students..

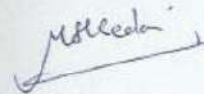

Res Sir,

W. r. t. above subject, First Year Engineering Department is going to be organized Orientation & Induction Programme i.e. from 15-11-2022 to 19-11-2022. The Speakers accepting the invitation by Mr. Sanjay Deoghare (AGM, HR & Personnel, Larson & Toubro Ltd.) and Prof. V. D. Navale (Career Counselor) on "**Value Education**" from 15-11-2022 to 18-11-2022. Approximate charges for the remuneration and other things is 25000/-.

As it is mandatory to conduct Induction Programme in First Year curriculum kindly permit us to organize the Induction Programme and sanction the budget for the same.

Thanking you.

Yours Sincerely

Prof. M. P. Ranaware

Abstract— Context is a vital concept in various fields, such as linguistics, psychology, and computer science. It refers to the background, environment, or situation in which an event, action, or idea occurs or exists. Categorization of context involves grouping contexts into different types or classes based on shared characteristics. Physical context, social context, cultural context, temporal context, and cognitive context are a few categories under which context can be divided. Each type of context plays a significant role in shaping our understanding and interpretation of events or actions. Understanding and categorizing context is essential for many applications, such as natural language processing, human-computer interaction, and communication studies, as it provides valuable information for interpretation, prediction, and decision-making.

In this paper, we will provide an overview of the concept of context and its categorization, highlighting the importance of context in various fields and applications. We will discuss each type of context and provide examples of how they are used in different fields. Finally, we will conclude by emphasizing the significance of understanding and categorizing context for interpretation, prediction, and decision-making.

Keywords-Context, Context awareness, Taxonomy of Context, Internet of Behaviour, Ubiquitous of Computing, User preference

I. INTRODUCTION

Context is a fundamental concept that plays a significant role in shaping our understanding and interpretation of events, actions, or ideas. Context is a fundamental concept that refers to the background, environment, or situation in which something occurs or exists. It is a crucial aspect of human understanding, and it plays a vital role in shaping our perception of events or actions. In different fields, such as linguistics, psychology, and computer science, context is essential for interpreting and analyzing various phenomena. Understanding context is crucial for natural language processing, machine learning, decision-making, and communication studies.

Context can be categorized in different ways, and each categorization defines a set of parameters that characterize the context. These parameters provide a framework for analyzing and interpreting context. Some of the common parameters used for categorizing context include:

- 1) *Physical Context*: Physical context refers to the physical environment in which an event or action occurs. The parameters that define physical context include location, weather conditions, and objects present in the surroundings. For example, the physical context of a conversation could be a coffee shop, a park, or an office[1].
- 2) *Social Context*: Social context refers to the social setting or relationships between people involved in an event or action. The parameters that define social context include the relationship between the people involved, their roles, and their social status. For example, the social context of a conversation could be a formal meeting, a casual chat, or a job interview[1][2].
- 3) *Cultural Context*: Cultural context refers to the cultural norms, values, and beliefs that influence an event or action. The parameters that define cultural context include language, customs, traditions, and religion. For example, the cultural context of a conversation could be a Western or Eastern culture, a religious or secular context.

Multi-attribute Group Decision-making Based on Hesitant Bipolar-valued Fuzzy Information and Social Network

Abstract: Fuzzy sets have undergone several expansions and generalisations in the literature, including Atanasov's intuitionistic fuzzy sets, type 2 fuzzy sets, and fuzzy multisets, to name a few. They can be regarded as fuzzy multisets from a formal standpoint; nevertheless, their interpretation differs from the two other approaches to fuzzy multisets that are currently available. Hesitating fuzzy sets (HFS) are very useful if consultants have hesitation in dealing with group decision-making problems between several possible memberships. However, these possible memberships can be not only crisp values in $[0,1]$, but also interval values during a practical evaluation process. Hesitant bipolar valued fuzzy set (HBVFS) is a generalization of HFS. This paper aims to introduce a general framework of multi-attribute group decision-making using social network. We propose two types of decision-making processes: Type-1 decision-making process and Type-2 decision-making process. In the Type-1 decision-making process, the experts' original opinion is process for the final ranking of alternatives. In Type-2 decision making process, there are two major aspects we consider. First, consistency tests and checking of consensus models are given for detecting that the judgments are logically rational. Otherwise, the framework demands (partial) decision-makers to review their assessments. Second, the coherence and consensus of several HBVFSs are established for final ranking of alternatives. The proposed framework is clarified by an example of software packages selection of a university.

Keywords: Group decision-making; aggregation operators; hesitant bipolar-valued fuzzy set

a) corresponding author: sapcoeh@rediffmail.com

b) rrakerimath@gmail.com

Abstract: Advisory system is the decision-maker for many problems. That will help to frame the solutions for themselves. Transesterification is one of the best methods for biodiesel synthesis from vegetable oils. Here the study of optimization of Transesterification is done by using three different heterogeneous catalysts separately from Karanja oil. Results are analyzed by the Taguchi method for input parametric optimization for Karanja biodiesel production using three different heterogeneous catalysts. Three different mathematical models are obtained by using the Taguchi method. These mathematical models are used for the development of the advisory system. The advisory system is developed by using Visual Basic software. Only by putting the input parameters, one can obtain output parameters without any experimentation work. Keywords—Biodiesel, Transesterification, Heterogeneous, Catalyst, Optimization

INTRODUCTION

In unstructured situations, advisory systems are used to contribute to decision-making. In the advisory systems research work, it is found that for many problems the decision-maker needs the identification of the problem. That will help to frame the solutions for themselves. As we know Transesterification is one of the best methods for biodiesel synthesis from vegetable oils. There is a need for optimization of this process using the heterogeneous catalyst and find out the best heterogeneous catalyst. So, the study of optimization of Transesterification is done for three different heterogeneous catalysts separately from Karanja oil. This study is helped to find out the best heterogeneous catalyst for biodiesel production [1, 4].

Twenty-five numbers of experiments were conducted as per Taguchi developed array using the given parametric conditions namely the molar ratio (MR) with catalyst concentration (CC) maintaining process temperature (PT) and time required (RT) controlling stirring (agitating) speed (SS) for three different catalysts [6,9]. The Karanja oil yield values obtained through the experimentations have been noted [6, 8]. Results were analyzed by the Taguchi method for input parametric optimization for Karanja biodiesel production using three different heterogeneous catalysts. Three different mathematical models are obtained by using the Taguchi method. These mathematical models are used for the development of the advisory system. This advisory system is developed for obtaining the output parameter values and graphs by just putting the input parameter values. The advisory system is developed by using Visual Basic. Only by putting the input parameter values, one can obtain output yield value without any experimentation work.

Biodiesel

Alternated fuel to petrodiesel may have suitable and technically acceptable. Biodiesels are produced from the fats of animals and mostly from vegetable oils. These are treated as an alternative to diesel engines. The various plants give edible or non-edible oils [5]. These contain various edibles oil plants like soybean, palm, sunflower, rapeseed, etc., and non-edibles oil plants like Jatropa, Mahua, Castor, Neem, Karanja, etc. In India biodiesel is obtained from

Analysis of Heterogeneous Catalyzed Castor oil Biodiesel

Abstract. The different catalysts are having an important key role for production (synthesis) of biodiesel. The heterogeneous catalysts are economically and commercially used especially in biodiesel industries. These catalysts are produced from the waste materials at a minimum cost. There is an interesting research area to find such waste materials for the preparation of the catalyst. Such materials are having a wide source and low cost. These eco-friendly waste catalysts can also use in some other organic reactions. Here Castor oil is used for biodiesel production through transesterification process. Castor oil biodiesel and its blends are used for testing of the IC engine. The analysis of results for performance and emission are discussed here. The results of different Castor Biodiesel blends are compared with petrodiesel. From the observations and results, this is concluded that the Castor biodiesel blends up to 20% by volume with diesel fuel can be replaced the pure diesel for existing diesel engine running. There are fewer emissions of exhaust gases without any drastic changes the conventional engines and with not losing any power outputs. This may help a large for reducing exhaust gas air pollution.

INTRODUCTION

Today, the world is getting evolved in every sector of life. The population is increasing on each successive day at a tremendous rate. As a result of this ever-increasing human population, there are growing needs about everything which are fulfilled by nature only. The India having the huge challenges for meeting the energy needs. Diesel is commonly used in the industries as well as for the transportation purpose [1]. India as an agricultural country requires a large amount of diesel to meet the diesel requirement to run the agricultural equipment based on the diesel engine. The diesel engines are commonly used to produce the power in the medium and heavy-duty applications because of their lower fuel consumption and portability. The performance and emission results using Castor biodiesel blends obtained are analyzed and discussed.

RESEARCH WORK

In this research work mainly there are two different experimental setups are used. One is for the production of biodiesel from vegetable oil using the transesterification process. Another is for testing of engine for performance, emission analysis of the engine with diesel and castor biodiesel blends [2]. Performance and emission characteristics of biodiesel blends obtained are studied. These results are compared with diesel fuel.

Abstract – Renewable and environmentally friendly biodiesel is a fuel that can provide comparative engine performance. The diesel engine performance, noise, and vibration parameters were studied. Vibration and noise production due to the combustion of fuel in engines have a direct effect on engine performance. Therefore, in this paper, the study of three different vibration parameters are mainly displacement, velocity, and acceleration was carried out with both diesel and biodiesel blends. Kirloskar makes single-cylinder, 4 strokes, water-cooled, 3.5 KW at 1500 rpm, diesel engine with water-cooled eddy current dynamometer was used. The output vibration parameters were measured using vibrometer, engine noise by noise meter, and also other measuring instruments. The testing of the engine was carried out at different loads as per the orthogonal array obtained by Minitab from the input parameters. The orthogonal array selection was based on three parameters and the four levels for each parameter. The experimental output conditions with optimal input parameters blend B15, applied load 7 kg, compression ratio 18 are vibration parameters such as Displacement 0.458 mm, Velocity 23.68 mm/s, and Acceleration 345.5m/s². The regression plot for acceleration obtained by Taguchi is compared with the ANN regression plot. There is a similarity in these plots. Hence results are validated by ANN.

Keywords: Biodiesel, Karanja oil, Velocity, Acceleration, Vibration.

I. Introduction

Utilization of diesel fuels in various zones and having importance for the national economy, the alternative to diesel fuel must be comparable, technically, and economically acceptable. Biodiesel is obtained by the transesterification process from different oils of vegetable and animal fats which are renewable sources with alcohol [1]. Due to the environmentally friendly properties of biodiesel, it has an internationally focused substitute for diesel fuel. Biodiesel may be used in the existing C I engine without any alterations [1].

Engine body vibrations give information about its operating parameters and the physical condition of the engine. It could be measured by attaching a vibrometer on the top of the engine head. Some researchers are working on the engine vibrations using biodiesel blends in comparison with petrodiesel over the world [2]. The study is focused differently to extract useful information about diesel engine operating conditions. Here the diesel engine vibration parameters were studied with given input parameters to the engine. The three parameters used in vibration measurement are mainly displacement, velocity, and acceleration. Velocity and acceleration are much important depending on the frequency range. An accelerometer was mounted vertically on the engine head using a powerful magnet supplied [3].

Excess vibrations wear out different engine components, loosening affect the alignment of foundation, damage of supporting structure. The maintenance cost increases because of more component failures and unplanned operations [4]. It can also affect the balance, risk of fatigue components, decreased engine efficiency, and finally engine life. So, it's essential to search the effect of different biodiesel blends on engine life. The study of different parameters of vibrations is more important because they affect engine performance as well as engine life [4]. It's a necessity to enhance engine life by optimal use of blends by analysis of vibrations of the engine. And to find out the best biodiesel blends for better performance and enhanced engine life.

II. Experimental Setup

In this experimental setup a Kirloskar made, variable compression ratio engine has used. The detailed engine specifications have as below. The computer controlled system test bed has equipped with eddy current dynamometer, thermocouples, tachometer, flow meters, and all other required measuring instruments.

ABSTRACT

A cost-effective stereolithography for medium-scale components is developed to fabricate 3D components with high build speed and resolution from photo-curable resin. The developed SLA utilizes a focused light beam of wavelength range (300 nm – 700 nm) coming from the DLP projector, passes through the objective lens, and finally is imposed on the platform containing a photo-curable resin layer. After focusing the light beam on the liquid resin layer, the photo-polymerization reaction occurs, and the liquid resin becomes solid. Thus, the 3D object is fabricated layer by layer, curing of liquid resin. The photopolymer used in this experiment is polyethylene glycol di-acrylate, and Irgacure 784 as photo-initiator. The Creo 3.0 software is used for the modeling of 3D objects. A special MATLAB code is developed for slicing of the 3D model and displaying the sliced image one by one through the DLP projector. The Arduino microcontroller with a stepper motor and ball screw is used to control the motion of the Z-stage platform. The Creation workshop software is also used to control the motion of the Z-stage and period to display the sliced images through the DLP projector. The medium-scale 3D objects with rectangular, square, and circular cross-sections are obtained by curing the aforementioned photo-curable resin. It is observed that the 3D objects are best cured for two seconds curing time with 0.1 mm curing depth along Z-axis. © 2021 The Authors. is very fluctuating and highly unpredictable. These are due to changes in manufacturing methods and technology, changes in product requirements, changes in present products, and a small product development period. Therefore, for the successful launching of any product, the rapid time to market must be as minimum as possible (Krar and Gill, 2003). The technology known as rapid prototyping (RP) reduces product development costs and periods. This advanced technology allows complex three-dimensional (3D) models or components to be fabricated. Rapid prototypes of the different objects are also required before their actual manufacturing so one can improve their design early. One of the main advantages of RP is that it enhances the verification of product design. The RP part reduces the product cost over traditional methods in the product development cycle (Wohlert, 1999). The designers can check out their concepts and ideas by using RP parts before manufacturing tools for fixtures and moulds. The rapid prototyping field is very fast developing and applies to all products, i.e., engineering and nonengineering. The major disadvantage of the RP parts is that the functional tests carried out on RP parts should be within limits of the physical properties of the fabricated parts.

Abstract

The low-cost digital light processing (DLP) based stereolithography (SLA) system is developed to build 3D objects from the liquid photopolymer. The DLP projector is used as a UV light source and DMD chip already present in the projector is used as a dynamic pattern generator. The light beam from DLP projector passed through the focusing lens and then projected on a layer of liquid photopolymer which is settled on the platform. The liquid resin layer is solidified by photo-polymerization process and thus 3D objects are fabricated by layered manufacturing technique. The experimental results are validated by characterizing the process parameters. The process parameters are characterized using the method of least square which is the in-built function in the MATLAB software, and a separate code is developed for the same. A good correlation is observed between the experimental values and numerical results. The maximum dimensional error difference between the experimental and numerical methods is 9.94%. The MATLAB code is also written for the optimization of the process parameters using *fminunc* function and gradient descent algorithm. The best set of parameter values is found and it is observed that the optimized values are close to the experimental values. The maximum difference observed between the experimental and optimized values is 9.13%. The novelty of this work is that the medium-scale 3D components are successfully fabricated with good accuracy, build speed and resolution. The methodology developed for the characterization and optimization of process parameters can be applied to any newly designed SLA system.

Abstract: Fuzzy sets have undergone several expansions and generalisations in the literature, including Atanasov's intuitionistic fuzzy sets, type 2 fuzzy sets, and fuzzy multisets, to name a few. They can be regarded as fuzzy multisets from a formal standpoint; nevertheless, their interpretation differs from the two other approaches to fuzzy multisets that are currently available. Hesitating fuzzy sets (HFS) are very useful if consultants have hesitation in dealing with group decision-making problems between several possible memberships. However, these possible memberships can be not only crisp values in $[0,1]$, but also interval values during a practical evaluation process. Hesitant bipolar valued fuzzy set (HBVFS) is a generalization of HFS. This paper aims to introduce a general framework of multi-attribute group decision-making using social network. We propose two types of decision-making processes: Type-1 decision-making process and Type-2 decision-making process. In the Type-1 decision-making process, the experts' original opinion is process for the final ranking of alternatives. In Type-2 decision making process, there are two major aspects we consider. First, consistency tests and checking of consensus models are given for detecting that the judgments are logically rational. Otherwise, the framework demands (partial) decision-makers to review their assessments. Second, the coherence and consensus of several HBVFSs are established for final ranking of alternatives. The proposed framework is clarified by an example of software packages selection of a university.

Abstract: The rise of fake news has posed a significant challenge within these networks, impacting our society. Detecting and combating fake news is crucial to ensure the reliability of information spread on social media platforms. This research proposes the utilization of machine learning techniques, specifically Natural Language Processing (NLP) algorithms, to detect fake news. The approach involves data normalization as a pre-processing step to clean the data before applying machine learning methods for classification. The model also considers the credibility of content and user reputation as factors in assessing the authenticity of news. The goal is to automate the detection process by training a model on a credibility-focused dataset, enabling accurate assessments of fake news on social media.

Index Terms - fake news, machine learning, NLP, information exchange, credibility, user reputation, Machine Learning

INTRODUCTION This research paper focuses on the detection of the research proposes an automated approach to detect fake news on social media using machine learning and NLP algorithms. The model considers content credibility and user reputation as factors to assess the authenticity of news. By leveraging these techniques, the research aims to enhance accuracy in identifying fake news and create a more trustworthy social media environment.

THE PROBLEM OF FAKE NEWS The problem of fake news has become increasingly pervasive in recent years, posing significant challenges to individuals, communities, and society as a whole. Here are some key points regarding the problem of fake news. Fake news is a pervasive issue resulting from the widespread use of social media and the manipulation of information. It spreads quickly through social media platforms, influences public opinion and beliefs, contributes to polarization, erodes trust in legitimate news sources, and poses challenges to maintaining an informed society. Combating fake news requires a multi-faceted approach involving technology, fact-checking organizations, media literacy programs, and user education. Collaboration among various stakeholders is necessary to address the problem effectively. Challenges in detection: Detecting fake news is a complex task due to its diverse forms and the speed at which it can spread. Fake news can range from subtly misleading content to outright fabricated stories. Moreover, technological advancements make it easier for malicious actors to create convincing and shareable fake news. Traditional fact-checking methods alone are often insufficient to keep up with the volume and velocity of fake news production.

IMPORTANCE The importance of fake news detection lies in its significant impact on individuals, communities, and society as a whole. Here are some key reasons highlighting the importance of detecting and combating fake news:

1. Protecting the public: Fake news can mislead and deceive people, leading them to form false beliefs or make ill-informed decisions. By detecting and exposing fake news, we can protect the public from being manipulated and ensure they have access to accurate and reliable information.
2. Preserving trust in information sources: Fake news undermines trust in traditional media outlets and legitimate news sources. By detecting and addressing fake news, we can preserve trust in reliable sources of information, maintaining the credibility and integrity of journalism and news reporting.
3. Safeguarding democracy: Fake news has the potential to distort public discourse, manipulate elections, and undermine democratic processes. By detecting and countering fake news, we can help safeguard the democratic principles of informed decision-making, open dialogue, and a well-informed citizenry.
4. Mitigating social polarization: Fake news often contributes to the polarization of society by reinforcing existing biases and creating divisions. By detecting and debunking fake news, we can promote critical thinking, reduce misinformation-driven polarization, and foster constructive dialogue among diverse groups.
5. Promoting media literacy: Fake news detection encourages media literacy and critical thinking skills. By educating individuals on how to identify and evaluate fake news, we empower them to become discerning consumers of information and better equipped to navigate the complex media landscape.
6. Enhancing social cohesion: Fake news can fuel tensions and conflicts within communities. By detecting and addressing fake news, we can promote a more unified and cohesive society, based on shared understanding and accurate information.
7. Supporting responsible journalism: Fake news detection helps differentiate between professional journalism and misinformation. By highlighting the importance of responsible reporting and fact-checking, we encourage ethical journalism practices and elevate the standards of news dissemination.

Abstract— Digital Assistance is computer program specially dedicated to assist user by responding to queries and performing basic tasks. It collects real time observations, which is use for better user experience and learn about the user's behavior. The digital assistant focuses at serving, the following most common and popular utilizations of digital assistant which are, question answering or information retrieval and implementing various local and/or remote services to perform tasks. Digital assistants make a use of advanced artificial intelligence (AI), natural language processing, natural language understanding, and machine learning to learn more about user and their environment in order to provide a personalized, chatty experience. The technologies require for digital voice assistant development are: Speech-To-Text (STT) And Text-To-Speech (TTS), Noise Control, Natural Language Processing (NLP), Natural Language Understanding (NLU), Natural Language Generation (NLG) and Deep learning. Digital assistant system uses microphone to capture the voice input of a user as a primary input. Users make use of a Microphone to capture the spoken input and a speaker to provide responses. The command block contains the main components to navigate the conversation of digital voice assistant with the user. ASR (Automatic speech recognition) is a method recognizer for speech, it forwards the recognition speculation to the NLU. A Natural Language Understanding (NLU) component can extract meaning as commands and associated entities from a pronouncement as text strings. Data providers obtain data using standard dataset from various sources for the better interaction.

Abstract- This paper shows the working of a device based on implementation of a voice command system as an intelligent personal assistant. The services provided by the device depends on the input given in the form of voice command by the user and ability to access information from a variety of online sources such as weather, telling time or accessing online applications to listen to music. This Voice driven device uses Raspberry Pi as its main hardware. Speech to text engine is used to convert the voice command to simple text. Query processing is then applied using natural language processing (NLP) onto this text to interpret the intended meaning of the command given by the user. After interpreting the intended meaning, text to speech conversion is used to give appropriate output in the form of speech. This device might provide a platform to visually impair to do their day to day tasks more easily like listening to music, checking weather conditions. ASR (Automatic speech recognition) is a method recognizer for speech it forward the recognition speculate to the NLU.

II. SYSTEM REQUIREMENT

1. Hardware Requirement :

- Microphone: The vocal commands given by the user which is used as input is given in through the microphone that is connected to the device. This vocal command is then later converted to simple text and keywords are searched through this text which helps the device to perform its functions and give out the expected results.
- Raspberry Pi: Raspberry Pi is the major component of the device. It acts as a mini computer. It is indulged in all the activities since the beginning when the user gives the input till the end when the output is presented to the user. It sorts of binds all the components together. All the processing of the data takes place here.
- Ethernet: The Ethernet cable helps us to provide the internet connection to the device. Internet plays a very important role in the operation of the device as it helps the device to do speech to text conversion, query processing through NLP and text to speech conversion. All these processes take place online that's why the internet connection is very essential.
- Speaker: Speaker performs the last function in this process. The speaker helps the device to give out the

Abstract - In recent years, predictive analytics has seen a surge in popularity, with many organizations using it to make decisions about everything from product development to marketing campaigns. The education sector is no exception, with many schools and universities using predictive analytics to identify at-risk students and improve retention rates. This survey paper reviews state of art in predictive analytics for student grades and career outcomes. The survey begins by discussing the different data types that can be used for predictive modeling, including demographic data, academic performance data, and social media data. Then this article reviews a few techniques used for predictive modeling in the education domain, including logistic regression, decision trees, and neural networks. Finally, this article discusses some of the challenges associated with predictive analytics in education and suggests future directions for research.

Key Words: student grade, career, machine learning, survey, svm, knn, j48, naïve bayes, linear regression, random forest, gradient boosting technique, xg boost, bayesian ridge regression

1. INTRODUCTION

In recent years, predictive analytics has become an increasingly popular tool for educators, administrators, and policymakers to use to make data-driven decisions about students' grades and careers. Predictive analytics is data mining that uses statistical techniques to predict future events or outcomes. In education, predictive analytics has been used to forecast everything from student retention and success rates to job placement and earnings. Various techniques can be used for predictive analytics, and the choice of method depends on the type of data available and the specific question being asked. Some standard methods include regression analysis, decision trees, and artificial neural networks. This survey paper will review the literature on predictive analytics in education, focusing on techniques for predicting student grades and career outcomes. We will first provide an overview of the history and applications of predictive analytics in education. Next, we will discuss some of the most used methods for predictive analytics. Finally, we

will discuss some challenges and limitations of predictive analytics in education.

2. LITERATURE SURVEY

- [1] Siti Dianah Abdul Bujang, Ali Selamat, Roliana Ibrahim, Ondrej Krejcar, Enrique Herrera-viedma, Hamido Fujita, And Nor Azura Md. Ghani (2021): In this article, the authors propose a multiclass prediction model with six predictive models to predict final students' grades. The model is based on the previous students' final examination results of the first-semester course. The article does a comparative analysis of combining oversampling SMOTE with different FS methods to evaluate the performance accuracy of student grade prediction.
- [2] Arati Yashwant Amrale, Namrata Deepak Pawshhe, Nikita Balu Sartape, Prof. Komal S. Munde (2022): This article proposes a counseling system that uses artificial intelligence to help with career guidance.
- [3] Vidyapriya.C, Vishhnuvardhan.R.C: In this article, the authors trained and tested three algorithms: logistic regression, Naive Bayes, and Support Vector Machine. They found that logistic regression had the highest accuracy compared to the other two algorithms.
- [4] Prathamesh Gavhane, Dhanraj Shinde, Ashwini Lomte, Naveen Nattuva, Shital Mandhane (2021): In this article, authors have analyzed most machine learning algorithms for student career prediction. They found that combining new hybrid algorithms like SvmAda, RfcAda and SvmRfc showed excellent results.
- [5] N. Vidyashreeram, Dr. A. Muthukumaravel: In this article, authors have used machine learning approaches such as Adaboost, SVN, RF, and DT to predict students' careers and have found that RF produces the best results in terms of accuracy.
- [6] Zafar Iqbal, Junaid Qadir, Adnan Noor Mian, And Faisal Kamiran: In this article, authors have discussed the use

Predictive Analysis of Student Grades and Career System

Sagar More¹, Pravin Bhagwat², Indrajeet Karande³, Sayaji Dhandge⁴, Sachin Shinde⁵

Abstract: A data-driven strategy called Predictive Analysis of Student Grades and Career System aims to improve academic success for students and support wise career choices. This approach makes use of past academic performance data, as well as other important variables, to produce insights and forecasts about each student's performance and possible career trajectories. The technology delivers important insights into factors influencing student progress, detects at-risk individuals, and provides individualized support by utilizing cutting-edge algorithms and statistical models.

Data gathering, preprocessing, feature selection, model development, and training are only a few of the system's crucial parts. It makes use of a variety of data sources, including academic transcripts, test scores, extracurricular involvement, and surveys of career interests. The system makes sure that the supplied data is relevant and of high quality to enable precise predictions through thorough feature engineering and data pretreatment.

Based on the unique properties of the dataset, the model-building process entails choosing the most suitable prediction models, such as decision trees, random forests, logistic regression, or neural networks. The internal parameters of these models are adjusted during the training process using past data to reduce prediction error and enhance performance. Using several test datasets, the model is evaluated and validated to determine its accuracy and generalizability.

The system's implementation makes it easy for users to access it, enabling students, teachers, and policymakers to enter pertinent student data and obtain career projections. The user interface makes forecasts, insights, and suggestions in an easy-to-understand format to help students make decisions about their futures in education and employment.

A viable approach to supporting students' academic journeys and helping with career planning is provided by the Predictive Analysis of Student Grades and Career System. Through the use of data-driven methodologies, the system equips stakeholders to take well-informed decisions, allocate resources efficiently, and create focused interventions that eventually enhance educational results and enable students to realize their full potential.

Keywords: naive bayes, linear regression, random forest, gradient boosting approach, xg boost, bayesian ridge regression, survey, svm, knn, j48, and student grade, career

I. INTRODUCTION

Predictive analytics has grown in popularity as a tool for educators, managers, and legislators to employ when making data-driven decisions about students' grades and careers in recent years. Data mining that use statistical methods to forecast upcoming events or results is known as predictive analytics. Predictive analytics have been employed in the field of education to estimate everything from student retention and success rates to job placement and pay. Predictive analytics uses a variety of methodologies, and the strategy selected relies on the type of data at hand and the particular query being posed. Regression analysis, decision trees, and artificial neural networks are a few examples of conventional techniques. The literature on predictive analytics in education will be reviewed in this survey article, with an emphasis on methods for forecasting student grades and career outcomes. We will start by giving a general review of the development

Abstract - Pests damage plants and crops, which has an impact on the nation's agricultural output. Typically, farmers or professionals use their own eyes to monitor the plants to look for disease and identify it. However, this approach could be time-consuming, expensive, and unreliable. Results from automatic detection employing image processing methods are quick and precise. In this study, deep convolutional networks are used to develop a novel method of classifying leaf images in order to recognise plant diseases. The technique of precise plant protection has the potential to grow and improve, and computer vision advancements have the potential to boost the market for applications in precision agriculture. Innovative training methods and the methodology employed make it simple and quick to implement the system in real-world settings. The deep convolutional neural network used in this method paper has been trained and fine-tuned to fit accurately to a database of plant leaves that was gathered independently for various plant illnesses. The innovation and advancement of the proposed model lay in its simplicity; by utilising deep CNN, the model can discriminate between ill and healthy leaves as well as between them and the environment. Healthy leaves and backdrop images are also in line with other classes.

Index Terms - deep convolutional neural networks, classification, training.

I. INTRODUCTION

Agriculture is one of India's key economic sectors. The Indian agricultural sector employs about 60% of the labour force of the nation. The largest producer of pulses, rice, wheat, spices, and spice-related items is believed to be India. The quality of the items that farmers produce, which is mostly dependent on the plant, determines how successful their businesses are. Plants are quite susceptible to illnesses that stunt their growth, which in turn has an impact on the farmer's environment. Use of automatic disease detection techniques is beneficial for spotting plant diseases at their earliest stages. In some sections of a plant, such as the leaves, the symptoms of plant diseases are obvious. It is laborious to manually diagnose plant illness using photographs of the leaves. Therefore, it is necessary to create computer techniques that would automate the disease identification and categorization procedure using leaf images.

Viral, fungal, and bacterial illnesses including Alternaria, Anthracnose, bacterial spot, canker, etc. are the principal diseases that affect plants. The bacterial disease is caused by the presence of germs in leaves or plants, the viral disease is caused by environmental changes, and the fungus disease is caused by the presence of fungus in the leaf. The process of segmentation is based on various aspects of an image, such as colour orientation, texture, borders, etc. Image segmentation is the process of dividing a picture into various parts. In this study, a Gradient Boosting Algorithm is used to segment leaves. When image processing is used for automatic illness identification, less work is required, costs are low, and on the plus side, it takes less time and is more accurate. In order to detect and identify plant diseases at an early stage and improve product quality, this study examines the significance of image processing techniques.

A. Motivation

The main motivation for producing this project is that, while every section of the world is developing, there is no such huge achievement or development in plant leaf diseases. So if we can prioritise this leaf field and detect infections, it will be useful to them.

B. Problem Statement

Veggies are very vulnerable to plant-impairing illnesses development that affects farmers' livelihoods ecology. Utilizing an automated illness detection system method is useful for finding plants early stages of illness Plant ailments appear themselves throughout the plant, including the leaves. The process of manually diagnosing takes a while utilising images of leaves to diagnose plant illness. The result is Development of computational algorithms is necessary to automate the disease identification procedure, and classifying with the aid of leaf photos.

Fake News Detection Using Machine Learning Literature Review

Prof. S. V. Shinde, Sunil Matkar, Ganesh Karale, Jatin Tonge, Mayur (Principal) of
Computer Engineering,

PDEA's College of Engineering Manjari, Pune, India.

Abstract— Most smart phone users choose social media over the internet to read the news. The news is published on news websites, which also serve as an official source. How can the news and articles that are shared on social media platforms like WhatsApp groups, Facebook Pages, Twitter, and other microblogs and social networking sites be verified? To take rumors seriously and present them as news is detrimental to society. Stopping rumors is urgently needed, especially in emerging nations like India. Instead, people need to concentrate on accurate, reliable news pieces. This essay presents a paradigm and a methodology for identifying fake news. It is attempted to aggregate the news with the use of machine learning and natural language processing, and then afterwards decide whether the news is true or fraudulent using Support Vector Machine. The proposed model's output is contrasted with those of earlier models. The suggested approach is effective and can accurately define whether a result is right up to 93.6% of the time.

Keywords: Fuzzy Logic, Fuzzy Inference, Machine Learning, Naive Based Classifier, News, Prediction, Recommendation, Support Vector Machine are all terms used to describe artificial intelligence (SVM).

1. INTRODUCTION

In the modern world, anyone can publish content online. Unfortunately, fake news attracts a lot of attention online, especially through web-based networking platforms. People are misled and don't stop to think before sending such

inaccurate information to the arrangement's

farthest point. Such acts are bad for society since

they cause some rumors or hazy news to spread, which in turn makes people or a certain group of people think negatively [1]. To deal with such actions, preventive measures must advance at the same rate as technology. The general population is greatly impacted by broad communications, and as is customary, some persons try to take advantage of this. There are several websites that provide misleading information.

This has been a wonderful motivator for us to work on this project. Fake news detection is developed to stop the rumors that are being disseminated through the various platforms, whether it be social media or messaging platforms. This is done to stop disseminating fake news which leads to activities like mob lynching. We frequently hear and read about mob lynchings that end in a person's death; fake news detection aims to identify these reports as false and put a stop to such actions, shielding society from these senseless acts of violence. [1] [3] [5] Sensor, the time for operation of railway gates is reduced which also includes the time for which the gates will remain closed. This ensures that the routine traffic must be held for least amount of time at the railway crossing. The paper intends to develop an automatic railway gate control system which is reliable and secured than the existing manual systems. The paper is organized as follows. Chapter II gives information about the related work which is previously carried out. Chapter III deals with the system overview and its requirements. Chapter IV describes the system architecture, block diagram, circuit diagram and the hardware requirements.

Stress & Emotion Recognition Using Sentiment Analysis With Brain Signal

Abstract—Stress, in common parlance, is the negative emotional state that arises when people feel overwhelmed by their responsibilities and cannot successfully do their daily tasks. There may be temporary benefits to stress. The negative effects of stress on health are well-documented, and they worsen with duration. Personality disorders, anxiety, and depression are all possible outcomes. The health issues stress creates can be mitigated if you have a firm grasp of how stress works in the body. One of the most reliable methods for determining human emotion and stress is through the analysis of brain signals. This signal-based or brain-wave-based technology can help diagnose a wide range of illnesses and impairments, much like EEG does. Emotion and mental strain can be detected using sentiment analysis. Therefore, a reliable, accurate, and precise system is essential. The purpose of this research is to create a more precise and reliable system for detecting stress in real time utilizing Electroencephalography (EEG) data. The human brain's electrical activity (EEG) can be used as a reliable, noninvasive stress gauge.

Keywords—EEG Signal, Stress, Emotion, Sentiment analysis.

I. INTRODUCTION

This According to findings from the field of psychological science, the feelings of pressure and strain collectively make up the category known as stress. Even a moderate level of stress can sometimes even be helpful. An unhealthy amount of stress can increase the risk of cardiovascular disease, high blood pressure, stroke, heart attack, and other health complications. Furthermore, it has an impact on mental health issues such as anxiety, depression, and personality disorders. Stress can be assessed in a variety of ways, including mental, physiological, emotional, and physical activities [1]. The diagnosis of stress by EEG signal analysis combined with sentiment interpretation [2] is a useful medical diagnostic tool that is used in physiological monitoring. The human brain is the most important structure in the body and is made up of billions of neurons that are all connected to each other. The electroencephalogram (EEG) and sentiment analysis are two methods that are utilized in the computation of how these neurons relate brain activity to physiological processes. In order to successfully deploy brain-computer interaction systems [3, 4], it is necessary to have a higher level of specialized competence in the field of brain-computer interaction, as determined by an examination of past work. "sad," "fear," "happy," and "calm" are some of the categories that can be used to classify emotions for the purpose of determining levels of stress [5]. In addition, the perspectives of different other researchers have been investigated. Numerous research have looked at EEG signals by employing a wide variety of machine learning and deep learning approaches [6, 7]. The goal of these studies was to determine the characteristics that are used to classify emotions. EEG data are applied to ascertain the quantity of human stress by monitoring the activity of the cerebral cortex with the assistance of a variety of feature extraction [8] and

classification algorithms. As a result of the many studies that have been conducted, we are aware that there are gaps in the study that need to be filled in order to eliminate some undesirable conditions.

Future applications of the BCI, such as illness analysis in medicine, human behavior in psychology, mental confusion in neuroscience, and humanism, will all be built on reliable recognition of sentiment and emotion [9].

II. RELATED WORK

Due in large part to the investigations that were carried out by a large number of researchers from all over the world, a significant amount of research has been done on the subject of the classification of emotions based on the activity of the human brain [13]. Although these earlier studies offer helpful information on the factors that are most influential on human stress, the framework that is currently used to understand human stress can only accommodate a partial answer to each of the questions that they raise. This work draws attention to the remarkable contributions made by researchers working in the present time period to the field of EEG signal processing technologies [14], while also drawing attention to the techniques that are related to this field. In order to acquire brain impulses, process those impulses, and then transform those processed impulses into signals that can be recognized by other devices, a BCI is absolutely necessary. [15] The task-switching method is useful for determining whether or not a person is experiencing stress because of the negative effects it has on the activity of their brain. [16] In every country, there are people who struggle with stress. People all over the world deal with stress on a regular basis as a result of issues related to their jobs, including frustrations, disappointments, difficult working conditions, and other similar factors. [10]. Most of the causes of stress in the world can be traced back to some aspect of one's working life. Based on the relapsing model of assessment, Figure 1 depicts the evaluation and analysis of stress in each country, as well as how stress management improves the nation's economic standing. When viewed from the perspective of the mainland of India, a sizeable portion of the working population suffers from a variety of stress-related conditions. [11].

Early Phase Identification and Detection for Plant Poor Growth in Rural Areas: A Survey of the State of the Art

Prasad Chaudhari , Ritesh V. Patil , and Parikshit N. Mahalle 

Abstract The food industry fuels the agricultural economies of Indian states. India has always been the largest manufacturing country, dominated by agriculture. Cereals, fruits, and vegetables such as potatoes, oranges, tomatoes, sugar cane, other cereals, and cotton are the most important crops in India. Maharashtra's impressive economic growth is partly based on its diverse citrus and cotton industries. This situation has created jobs for many people and great potential for economic growth in the state. The government focused on disease control, labor costs, and global markets to keep the citrus and cotton industries thriving. Recently, citrus canker, lime green, and black spotted cotton have seriously threatened citrus trees in Maharashtra. These diseases cause tree dieback and death, reduced yields, and loss of marketability. Likewise, farmers worry about the cost of tree loss, exploration, and chemicals used to control the disease. Automated detection systems can help prevent and reduce significant losses to industry, farmers, and the country's economy. This study aims to detect these diseases in crops using pattern recognition methods. The recognition method comprises three main subsystems: image acquisition, processing, and pattern recognition. The images are pre-processed to eliminate any unwanted noise, then the sheets' boundaries are identified, and finally, any relevant features are extracted. Different culture conditions were utilized using pattern recognition techniques to categorize the samples. To evaluate the classification method, we compared the results of different classification methods for detecting diseases in fruits, vegetables, and cereals, achieving an accuracy of 90–95%.

Abstract— Electricity is an essential source of energy in human life. Every technology in modern life, from equipment to wrist watches, is powered by electricity. It is the most fundamental necessity, after food, shelter, and clothes. Many developments have occurred in power departments during the last decade, but they still use a manual billing system. A smart utility community management framework is presented in this research. Customers now need frameworks having automation and strong security since innovation has reached a certain stage. The paid-ahead-of-time meter is essential in assisting the customer in understanding their energy consumption, alleviating difficulties faced by the utility staff in reading the normal meter, and eradicating errors in bill issuance. These concerns relate to updating an existing regular energy meter that is connected to a security system and paid-in-advance framework. A Device 3B+, a traditional energy meter, a GSM device, a current measurement device, and a hand-off are all included in the stated paid-ahead meter. The two aspects of the proposed proposal are GSM innovation and overcurrent security. GSM technology is used for both transmission and storage functions.

Keywords: - Artificial Intelligence, Billing Management System, GSM Technology, Prepaid & Postpaid Tariffs Smart Energy Meter.

I. INTRODUCTION

The smart grid uses advanced communication technologies including intelligent technologies to improve

and evaluate performance of the electrical energy network. Among the most significant and amazing growth factors is electricity. Nowadays, having power is a necessary component of being a man [1]. A tool used to determine how much electricity is utilized by a residential, commercial, or other electrically powered item is called an energy meter. The development of energy meter technology has advanced significantly since a few years ago. The vitality meter's accuracy and movement have substantially improved in recent years. There have been a number of innovations that have decreased the size and mass of the conventional powerful magnetic body and coil big electromechanical vitality meter in addition to advancements in usability and description. The way electrical factors are calculated has undergone a complete revolution with the development of sophisticated electronic energy meters throughout the last century. The accuracy, determination, voltage performance, smooth settling, and reading capabilities of a numerical energy meter are greater [2]. An analogue vitality meter's drawback is that since it only monitors control in one coordinate, it cannot be thoroughly studied.

Recently, a sensible gauge has been shown in the advertisement. A critical meter is often a microelectronic meter with a microcontroller inserted that can record energy usage in less than an hour and report it back to the reseller for arguing on a particular day. Businesses and consumers benefit enormously from clever meters in terms of accuracy, competence, and comfort. Customers can see the information the meter provides to see how much electricity is being used.

Abstract— In this essay, we look at how to provide a product to a consumer as quickly as possible without compromising its quality. We'll show how putting six continuous architectural principles into practise will help us ensure the quality of the finished project while shortening the manufacturing cycle. Prior to reducing costs, it's important to provide the things as fast as feasible. We can do this by using a variety of strategies, such as availability plans, that enable us to maintain the greatest levels of quality, just as the software team was able to. He talks about these approaches, as well as a few more, for delivering top-notch printer software designs quickly. India has a big food-related industry. principal means of support. In this essay, I want to look at how to provide items to customers as quickly as possible without sacrificing product quality. Even while making enhancements, we will consider how the six comparable design components may ensure that the finished product has the highest possible quality in the shortest period of time possible. Giving excellent goods quickly and doing them effectively are both essential. To do this, we may use a range of strategies, such as unavailability techniques, which enable us to maintain the highest level of accuracy that our team of engineers is capable of. He discusses these methods and a few options for the goods' distribution. Using this stock market idea, growers can sell their goods at the highest bidder pricing. Farmers that fill out this form may register themselves and have access to a variety of facilities, such as market alerts, merchant engagement, assessments, and more. The creation of knowledge devices, automated weapon systems,[1] language comprehension, computer vision, legal analysis, and agricultural monitoring are just a few examples of the many uses for data modelling. The problem of the expanding global agricultural output will be addressed by the employment of AI in contemporary agriculture. Based on AI, it should be easy to recognise and quickly identify plants, and judgments on the appropriate chemical to apply and the necessary safe zone might be made quickly. The majority of residents in this area rely on agricultural products for the majority of their income, which is good for the whole neighbourhood. Farmers are in responsible of growing the food that is required for a healthy lifestyle. Choosing the right market value for the shares they are providing is a challenge for the sales reps. The costs of this corporation considerably outweigh its profits previously mentioned concept of share pri permitted to offer their goods at the highest l extra services available to farmers who joi assessments, supplier relationships, market up

other advantages and features of a similar kind. Data analytics has several applications, including as a tool of knowledge.

Keywords: AI, Business Development, Hybrid Algorithm, OOSE, Neural Network, CNN and XBLR.

I. INTRODUCTION

Prototypes are one of the life cycle pattern kinds for software development that are most often utilised. Many businesses that make software use the testing approach. The progressive model is often the order of steps utilised [2] when a customer submits a large-scale programme with the intention of completing it rapidly. The evolved life cycle approach is favoured over other life cycle methods because it enables us to continually develop the system given to the client while maintaining the basic minimums, or, to put it another way, the essential qualities of the product. For the application developers and the company, it is very problematic when the customer is unsure of his requirements and continuously altering them over time.

The life-cycle model is also employed well in modelling inside the software development business. Companies and organisations that create software often use prototyping. When a customer requests a speedy turnaround on a significant project, the up is often employed in connection with the life cycle idea. The transformational model [3] was chosen above other available models because it only includes the most basic elements, which we should really refer to as the item's essential components, and enables us to continue working on the building even after it has been delivered to the customer. When the consumer is unsure about their wants and often changes them, the programmers and the company face significant challenges. There will be a significant investment of resources, including time, energy, and labour. They should easily be able to introduce new items using OOSE since the new variables will absorb the key characteristics of the existing ones. Although the courses with either a solid item are restricted to carrying out their particular designated goal, to apply such elements in the construction of Device agile development (Central Board of tion) is useful in this situation. It enables us mputer system using the stock components. tive [4] is to build the system using pre-ents and integrating them rather than

Classification of ECG Signal for Cardiac Arrhythmia Detection Using GAN Method

S. T. Sanamdikar, N. M. Karajanagi, K. H. Kowdiki, and S. B. Kamble

Abstract Today, a big number of people suffer from various cardiac problems all over the world. As a result, knowing how the ECG signal works is critical for recognising a number of heart diseases. The electrocardiogram (ECG) is a test that determines the electrical strength of the heart. In an ECG signal, PQRST waves are a group of waves that make up a cardiac cycle. The amplitude and time intervals of PQRST waves are determined for the learning of ECG signals in the attribute removal of ECG signals. The amplitudes and time intervals of the PQRST segment can be used to determine the appropriate operation of the human heart. The majority of approaches and studies for analysing the ECG signal have been created in recent years. Wavelet transform, support vector machines, genetic algorithm, artificial neural networks, fuzzy logic methods and other principal component analysis are used in the majority of the systems. In this paper, the methodologies of support vector regression, kernel principal component analysis, general sparse neural network and generative adversarial network are compared. The GAN method outperforms both of the other methods. However, each of the tactics and strategies listed above has its own set of benefits and drawbacks. MATLAB software was used to create the proposed system. The proposed technique is demonstrated in this study with the use of the MIT-BIH arrhythmia record, which was used to manually annotate and establish validation.

Keywords Artificial neural networks · Support vector regression · Kernel principal component analysis · General sparse neural network · Generative adversarial network

Categorization of Cardiac Arrhythmia from ECG Waveform by Using Super Vector Regression Method

S. T. Sanamdikar, N. M. Karajanagi, K. H. Kowdiki, and S. B. Kamble

Abstract Various heart disorders affect a large number of people around the world today. As a result, understanding the properties of the ECG waveform is crucial to identify a variety of heart conditions. The ECG is an investigation that determines the strength of the electric impulses of heart. PQRST waves are a collection of waves that make up a cardiac cycle in an ECG waveform. The magnitude and temporal periods of PQRST impulses are estimated for the learning of ECG waveforms in the attribute removal of ECG waveforms. The values of the PQRST segment's amplitudes and time intervals can be utilized to determine the proper operation of the human heart. In recent years, the bulk of methodologies and studies for analysing the ECG waveform have been developed. In the bulk of the systems, fuzzy logic methods, artificial neural networks, genetic algorithm, support vector machines, the wavelet transform and other waveform examining techniques are used. SVM, ANN, neural mode decomposition and support vector regression approaches are compared in this work. The ISVR approach outperforms the other two methods. Each of the methods and strategies outlined above, however, have its own set of compensation and disadvantages. In this article, the wavelet transform Db4 is utilized to extract various properties from an ECG waveform. The proposed system is designed with MATLAB software. The verification of arrhythmia is presented in this study utilising the MIT-BIH dataset, which was used to validate should be manually annotated and produced.

Keywords Cardiac arrhythmia · QRS complex · Median filter · Electrocardiograph · Wavelet transform Db4

Through his curiosity, Isaac Newton emphasized and encouraged learning and expanding knowledge. Newton once said "what we know is a drop, what we don't know is an ocean." Newton clearly emphasized and believed that there is so much more to learn and know about in the world and what we know is merely the surface level. Because so many people - children and adults alike - looked up to Newton's work, he has and will continue to encourage society to learn more about and explore the world, further helping better and develop our society.

Through his great and revolutionary discoveries, Isaac Newton taught the world to continue exploring and help influence a more developed society. Today, scientists are able to use the ideas and discoveries of Newton to better understand how our world works. For example, thanks to Newton's finding of the principle of gravity and his development of the universal law of gravitation, scientists are able to have a better understanding of gravity and how it works. Scientists can then use this understanding to develop new theories or discoveries and help society learn a bit more about how things work around us to find more efficient ways to do certain tasks. Without Newton's discoveries, we would not even be able to know surface level information about so many parts of our world and in turn, would not be able to progress and better society.

Overall, Newton has shown the importance of curiosity, encouraged the world to learn and expand our knowledge, and use this newfound knowledge to explore the world and develop a better society, hence making him the most influential person. As Newton has successfully influenced many people around the world, hopefully we can build enough bridges for all the walls we have built and started to build.

Without Newton's discoveries, we would not even be able to know surface level information about so many parts of our world and in turn, would not be able to progress and better society.

Overall, Newton has shown the importance of curiosity, encouraged the world to learn and expand our knowledge, and use this newfound knowledge to explore the world and develop a better society, hence making him the most influential person. As Newton has successfully influenced many people around the world, hopefully we can build enough bridges for all the walls we have built and started to build.

WEEK 3 ANALYSES REFERENCE SHEET

Writing an analysis can be tough, so here are some ways to do it!

Method	Explanation
Generalization	If something is true for a small group, it might also be true for a bigger group
Sign/Clue	One piece of evidence signals a specific condition or idea
Causality	One event or state can cause another- basically a cause and effect relationship
Authority	Think about whether the author is reliable and if they are a professional. This can also be used as an analysis.
Principle	Build on both your moral values and the moral values of the audience.
Analogy	Compare one situation, idea, or event to another

Course Syllabus.

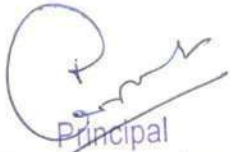

C course content

✦ Basics content of C Language

- What is C language
- History of C Language
- Features of C Language
- How to Install C
- The Structure of a C Program
- How to Write C Programs?
- Compilation process in C
- Printf() and scanf() in C

✦ C language Overview

- Variables in C and Its Types
- Data Types in C
- C language Keywords
- Identifiers in C and their type
- Role of operator in C language
- Comments in C and their Types
- Format Specifier in C language
- Escape sequence
- (ASCII) American Standard Code for information interchange values in C
- Role of a constraints in C
- The Types of Literals that exist in C programs
- Importance of Tokens in C
- Boolean Data Type in C
- Static keyword in C
- Role of programming errors in C and their types
- Role of compile time and run time error in C
- Conditional operator in C language

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

- Bitwise operator in C and their types

✦ Control Statements Which Used C Language:

- The IF.....ELSE Statement in C and variants of if statement in C language
- IF.....ELSE ladder (C switch statement)
- The difference between If ...else and switch statement
- Loops in C programming and their three types
- Do while loop in C
- While loop in C (pre-tested loop)
- For loop in C Language
- Nested loop in C language
- Infinite loop in C language
- Role of C break statement
- C continue statement
- goto statement in c
- type casting in c

✦ Function in C

- Advantages of C Function and their Types
- Call by value method in C and call by reference method in C
- Recursion process in C
- Storage classes in C and their Four types

✦ Array in C

- Array: what and why?
- 1D arrays
- 2Darrays
- Mulri Dimentional array
- Dynamic arrays

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

✦ Pointers in C

- Pointers in C and declaring a pointer
- Double pointer in C
- Dangling pointer in C
- Sizeof() operator in c
- Constraint pointer in c and their syntax
- Void pointer in c
- Dereference pointer (indirection operator) in C and why we use

✦ Dynamic memory in C

- The concept of dynamic memory allocation in c language and their 4 types of functions

✦ String Handling in C

- gets() puts() function in C
- Role of string function
- String Length: strlen function in C language
- The strcpy function
- String concatenation: strcat()
- Compare string function in cstrcmp()
- The reverse string function.....strrev()
- String lowercase functionstrlwr()
- String uppercase function...strupr()
- String strstr()
- Match function in C

The Structures and union in C

- Advantages of a structure in c
- Defining structuretypedef keyword in C
- Uses of an array structures in c
- Nested structure in C
- Structure padding in c
- Defining union datatype in c

Principal

✦ File Management in C

- Introduction of file management and need of file handling in C
- Fprintf() and fscanf() function
- Writing file fputs() function and reading file fgets() function
- fseek() function in c
- rewind() function in c
- ftell() dunction in c

Dynamic Memory allocation

- ✓ Introduction to Dynamic Memory Allocation
- ✓ Malloc
- ✓ Calloc
- ✓ Realloc
- ✓ Free

Principal

Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

Basic Content of C for Embedded

- Introduction about Embedded
- Program organization and microcontroller memory
- Data types, constants, variables
- Microcontroller register/port addresses
- Operators: arithmetic, logical, shift
- Control structures: if, while, for
- Functions
- Interrupt routines

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

First C Program

Before starting the abcd of C language, you need to learn how to write, compile and run the first c program.

To write the first c program, open the C console and write the following code:

1. `#include <stdio.h>`
2. `int main(){`
3. `printf("Hello C Language");`
4. `return 0;`
5. `}`

#include <stdio.h> includes the **standard input output** library functions. The `printf()` function is defined in `stdio.h`.

int main() The **main()** function is the entry point of every program in c language.

printf() The `printf()` function is **used to print data** on the console.

return 0 The `return 0` statement, returns execution status to the OS. The 0 value is used for successful execution and 1 for unsuccessful execution.

How to compile and run the c program

There are 2 ways to compile and run the c program, by menu and by shortcut.

By menu

Now **click on the compile menu then compile sub menu** to compile the c program.

Then **click on the run menu then run sub menu** to run the c program.

By shortcut

Or, press ctrl+f9 keys compile and run the program directly.

You will see the following output on user screen.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

You can view the user screen any time by pressing the **alt+f5** keys.

Now **press Esc** to return to the turbo c++ console.

Compilation process in c

What is a compilation?

The compilation is a process of converting the source code into object code. It is done with the help of the compiler. The compiler checks the source code for the syntactical or structural errors, and if the source code is error-free, then it generates the object code.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

The c compilation process converts the source code taken as input into the object code or machine code. The compilation process can be divided into four steps, i.e., Pre-processing, Compiling, Assembling, and Linking.

The preprocessor takes the source code as an input, and it removes all the comments from the source code. The preprocessor takes the preprocessor directive and interprets it. For example, if `<stdio.h>`, the directive is available in the program, then the preprocessor interprets the directive and replace this directive with the content of the `'stdio.h'` file.

The following are the phases through which our program passes before being transformed into an executable form:

- **Preprocessor**
- **Compiler**
- **Assembler**
- **Linker**

Preprocessor

The source code is the code which is written in a text editor and the source code file is given an extension ".c". This source code is first passed to the preprocessor, and then the preprocessor expands this code. After expanding the code, the expanded code is passed to the compiler.

Compiler

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

The code which is expanded by the preprocessor is passed to the compiler. The compiler converts this code into assembly code. Or we can say that the C compiler converts the pre-processed code into assembly code.

Assembler

The assembly code is converted into object code by using an assembler. The name of the object file generated by the assembler is the same as the source file. The extension of the object file in DOS is '.obj,' and in UNIX, the extension is 'o'. If the name of the source file is '**hello.c**', then the name of the object file would be 'hello.obj'.

Linker

Mainly, all the programs written in C use library functions. These library functions are pre-compiled, and the object code of these library files is stored with '.lib' (or '.a') extension. The main working of the linker is to combine the object code of library files with the object code of our program. Sometimes the situation arises when our program refers to the functions defined in other files; then linker plays a very important role in this. It links the object code of these files to our program. Therefore, we conclude that the job of the linker is to link the object code of our program with the object code of the library files and other files. The output of the linker is the executable file. The name of the executable file is the same as the source file but differs only in their extensions. In DOS, the extension of the executable file is '.exe', and in UNIX, the executable file can be named as 'a.out'. For example, if we are using printf() function in a program, then the linker adds its associated code in an output file.

Let's understand through an example.

hello.c

1. #include <stdio.h>
2. int main()
3. {
4. printf("Hello javaTpoint");
5. return 0;
6. }

Now, we will create a flow diagram of the above program:

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

In the above flow diagram, the following steps are taken to execute a program:

- Firstly, the input file, i.e., **hello.c**, is passed to the preprocessor, and the preprocessor converts the source code into expanded source code. The extension of the expanded source code would be **hello.i**.
- The expanded source code is passed to the compiler, and the compiler converts this expanded source code into assembly code. The extension of the assembly code would be **hello.s**.
- This assembly code is then sent to the assembler, which converts the assembly code into object code.
- After the creation of an object code, the linker creates the executable file. The loader will then load the executable file for the execution.

Through his curiosity, Isaac Newton emphasized and encouraged learning and expanding knowledge. Newton once said "what we know is a drop, what we don't know is an ocean." Newton clearly emphasized and believed that there is so much more to learn and know about in the world and what we know is merely the surface level. Because so many people - children and adults alike - looked up to Newton's work, he has and will continue to encourage society to learn more about and explore the world, further helping better and develop our society.

Through his great and revolutionary discoveries, Isaac Newton taught the world to continue exploring and help influence a more developed society. Today, scientists are able to use the ideas and discoveries of Newton to better understand how our world works. For example, thanks to Newton's finding of the principle of gravity and his development of the universal law of gravitation, scientists are able to have a better understanding of gravity and how it works. Scientists can then use this understanding to develop new theories or discoveries and help society learn a bit more about how things work around us to find more efficient ways to do certain tasks. Without Newton's discoveries, we would not even be able to know surface level information about so many parts of our world and in turn, would not be able to progress and better society.

Overall, Newton has shown the importance of curiosity, encouraged the world to learn and expand our knowledge, and use this newfound knowledge to explore the world and develop a better society, hence making him the most influential person. As Newton has successfully influenced many people around the world, hopefully we can build enough bridges for all the walls we have built and started to build.

First C Program

Before starting the abcd of C language, you need to learn how to write, compile and run the first c program.

To write the first c program, open the C console and write the following code:

1. `#include <stdio.h>`
2. `int main(){`
3. `printf("Hello C Language");`
4. `return 0;`
5. `}`

#include <stdio.h> includes the **standard input output** library functions. The `printf()` function is defined in `stdio.h`.

int main() The **main()** function is the entry point of every program in c language.

printf() The `printf()` function is **used to print data** on the console.

return 0 The `return 0` statement, returns execution status to the OS. The 0 value is used for successful execution and 1 for unsuccessful execution.

How to compile and run the c program

There are 2 ways to compile and run the c program, by menu and by shortcut.

By menu

Now **click on the compile menu then compile sub menu** to compile the c program.

Then **click on the run menu then run sub menu** to run the c program.

By shortcut

Or, press ctrl+f9 keys compile and run the program directly.

You will see the following output on user screen.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

You can view the user screen any time by pressing the **alt+f5** keys.

Now **press Esc** to return to the turbo c++ console.

Compilation process in c

What is a compilation?

The compilation is a process of converting the source code into object code. It is done with the help of the compiler. The compiler checks the source code for the syntactical or structural errors, and if the source code is error-free, then it generates the object code.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

The c compilation process converts the source code taken as input into the object code or machine code. The compilation process can be divided into four steps, i.e., Pre-processing, Compiling, Assembling, and Linking.

The preprocessor takes the source code as an input, and it removes all the comments from the source code. The preprocessor takes the preprocessor directive and interprets it. For example, if `<stdio.h>`, the directive is available in the program, then the preprocessor interprets the directive and replace this directive with the content of the `'stdio.h'` file.

The following are the phases through which our program passes before being transformed into an executable form:

- **Preprocessor**
- **Compiler**
- **Assembler**
- **Linker**

Preprocessor

The source code is the code which is written in a text editor and the source code file is given an extension ".c". This source code is first passed to the preprocessor, and then the preprocessor expands this code. After expanding the code, the expanded code is passed to the compiler.

Compiler

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

The code which is expanded by the preprocessor is passed to the compiler. The compiler converts this code into assembly code. Or we can say that the C compiler converts the pre-processed code into assembly code.

Assembler

The assembly code is converted into object code by using an assembler. The name of the object file generated by the assembler is the same as the source file. The extension of the object file in DOS is '.obj,' and in UNIX, the extension is 'o'. If the name of the source file is '**hello.c**', then the name of the object file would be 'hello.obj'.

Linker

Mainly, all the programs written in C use library functions. These library functions are pre-compiled, and the object code of these library files is stored with '.lib' (or '.a') extension. The main working of the linker is to combine the object code of library files with the object code of our program. Sometimes the situation arises when our program refers to the functions defined in other files; then linker plays a very important role in this. It links the object code of these files to our program. Therefore, we conclude that the job of the linker is to link the object code of our program with the object code of the library files and other files. The output of the linker is the executable file. The name of the executable file is the same as the source file but differs only in their extensions. In DOS, the extension of the executable file is '.exe', and in UNIX, the executable file can be named as 'a.out'. For example, if we are using printf() function in a program, then the linker adds its associated code in an output file.

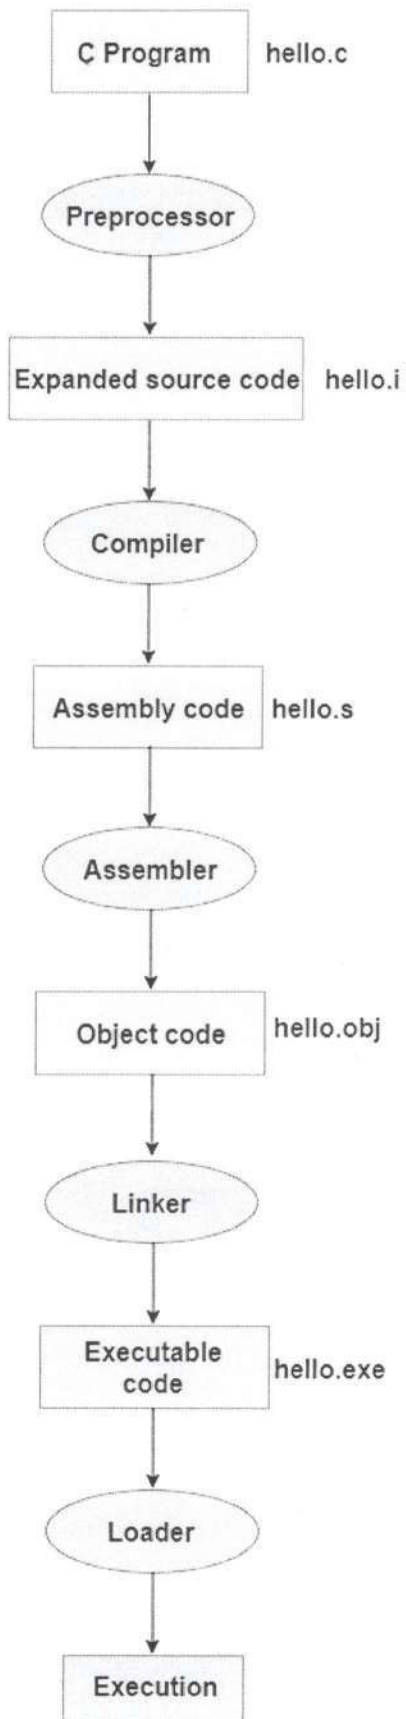

Let's understand through an example.

hello.c

1. #include <stdio.h>
2. int main()
3. {
4. printf("Hello javaTpoint");
5. return 0;
6. }

Now, we will create a flow diagram of the above program:

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

Principal
Pune District Education Association's
College of Engineering, Manjari (Bk.),
Pune - 412307.

In the above flow diagram, the following steps are taken to execute a program:

- Firstly, the input file, i.e., **hello.c**, is passed to the preprocessor, and the preprocessor converts the source code into expanded source code. The extension of the expanded source code would be **hello.i**.
- The expanded source code is passed to the compiler, and the compiler converts this expanded source code into assembly code. The extension of the assembly code would be **hello.s**.
- This assembly code is then sent to the assembler, which converts the assembly code into object code.
- After the creation of an object code, the linker creates the executable file. The loader will then load the executable file for the execution.

MEMORANDUM OF UNDERSTANDING

This MEMORANDUM OF UNDERSTANDING (MoU) is entered on 1st April 2018

between

IBS,

**Marketing Office A/ 211 To A/214, Mega Center Behind Corporation Bank,
Next to Nobal Hospital, Solapur Road Hadapsar, Pune -411028.**

○ Represented by **Mr. Sharadchandra Joshi & Mr. Sudhir Kumar Vishwakarma**

And

PDEA's College of Engineering

Manjari (Bk), Hadapsar, Pune-412307,

IBS and PDEA's College of Engineering Manjari, are also referred to individually as 'First party' and 'Second party' respectively and collectively as 'parties'.

Article 1: Objectives of MoU

Some broad goals of this MoU are to:

- 1. Make aware the faculty in innovative methods in teaching
2. Improving faculty's soft skills, interpersonal skills
3. Training the faculty to develop leadership skills among the students and overall personality development of student.
4. Conduct group discussion and activities for improvement of interview skills of students.
5. Introduce business skills for entrepreneurship development.

Article 2: Activities involved

1. Guest lecture/Session on group discussion, preparation of personal interview, business communication
2. Arranging FDP on innovative methods in teaching, soft skills, interpersonal skills, role of teacher in higher education, mentoring, counselling etc.

Article 3: Roles of First party

1. Company will conduct seminars related to the topics mentioned in the objectives.
2. Company will provide guidance to students in said topic.
3. Company will provide Journals to keep in Library.
4. Company will provide Banner to display on the entrance of the Library.

Article 4: Roles of Second party

1. To communicate with the first party and notify students about available time slots about conduction of activity.
2. Provide necessary infrastructure to conduct sessions, training programs etc.

Article 5: Outcomes

This MoU will enable the students

1. To experience and appear with confidence group discussions and personal interviews
2. To find placement after the graduation.
3. To develop interpersonal skills.

This MoU will enable the faculty

1. To improve the soft skills.
2. To develop the personality and leadership skills among the students

Article 6: Duration of MOU

This MoU shall remain in force for a period of FIVE years commencing from the date of signing of this document from 1st April 2018 To 31st March 2023. The parties reserve the right to terminate this MoU by either party giving three month written notice to the other, where such termination occurs, the provisions of this Memorandum shall continue to apply to ongoing activities until their completion.

Article 7: Financial terms / condition

Based on this intend both parties will decide jointly the commercial terms that would be mutually beneficial for the success of this venture.

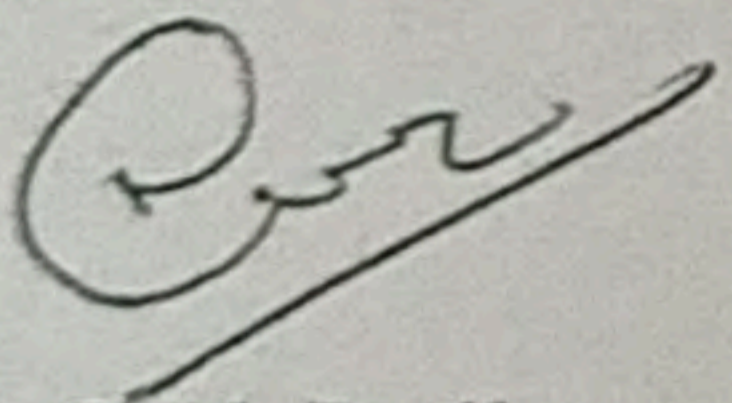

Article 8: Statement of Intent

Nothing in this MoU shall be construed to as creating any legal relationships between the parties. This MoU is the statement of intent to foster genuine and mutually beneficial collaboration.

Article 9: Amendments

Amendments to this contract, if any, will be made only after joint discussion and agreement between both parties and will require a freshly approved and signed agreement by the designated representatives of each party. The terms/clauses/articles in this MoU can be reviewed by mutual consent by serving three month written notice the other party. New or amended terms/clauses/articles may be agreed as of a renewed MoU.

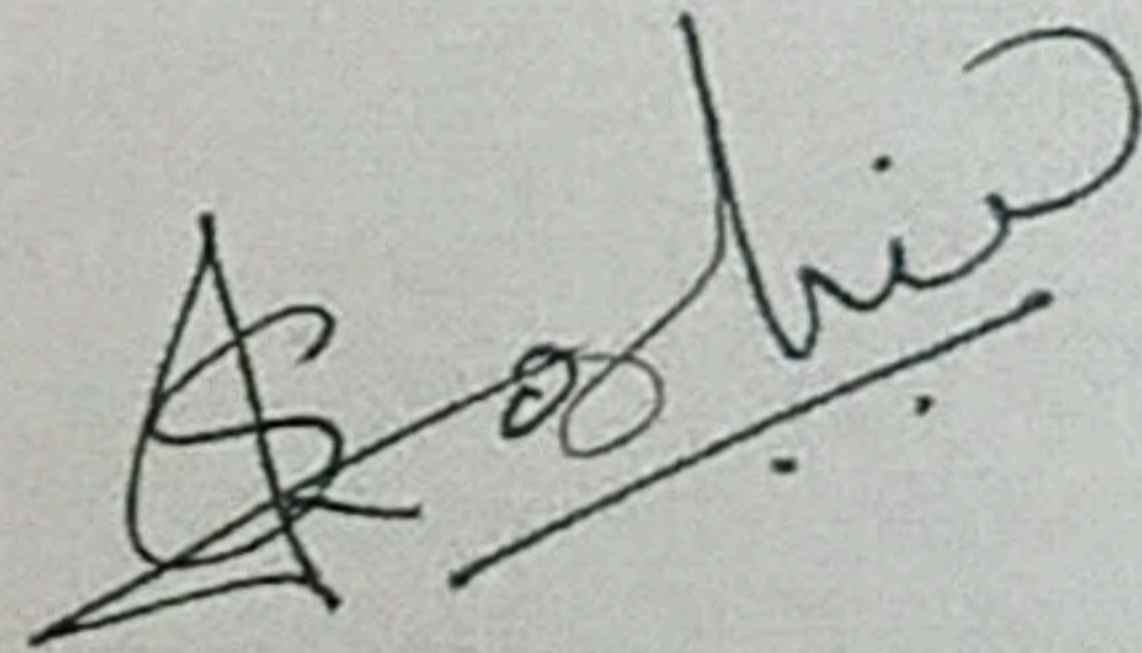

PDEA's College of Engineering Manjari and IBS, Pune welcome the establishment of this MoU for cooperation & jointly agree to the provisions as set above. This MoU shall be effective from the date of its signing.

MEMORANDUM OF UNDERSTANDING (MOU)

This MOU is a legal agreement made between "KDN Infotech Pvt. Ltd. & V And K Softtech Solutions Pvt. Ltd."

AND

College Name. PDEA's College Of Engineering, Manjari

Purpose:

The purpose of this Agreement is to establish a relationship between the company and College by organizing mentorship and guidance programs for the students to grow their career with the right decision.

Term:

The initial term of this Agreement shall be for five years, from July 1, 20~~21~~²⁰²¹ to June 30, 20~~26~~²³ with the option to renew for up to an additional five years, except that either Party may, at any time, with or without cause, terminate this Agreement by providing the other Party with thirty (30) days advance written notice.

Objectives:

- As we are education training & Placement Company we provide the programming language training and job oriented placement programs Our excellent training staff will help you to boost programming knowledge & build career in well-known IT Industry.
- We will provide IT Career guidance to candidates which will help them to select the career path.
- IT Industry Awareness
- Course guidance for Non-IT candidates, so it will be easy for them to select a proper course to enter into an IT field and build their career.
- Guidance on Aptitude test
- Free Internship for Post graduate shortlisted candidates.
- **Job oriented course**

- Free Industrial & Embedded C programming language one month course.
- Free placement Calls shortlisted candidates.
- Confidentiality:

Licensee agrees to observe complete confidentiality with respect to the College, and will not disclose any information, copy, reproduce or alter the Information provided.

Notice:

- 1) This Agreement may be executed in several counterparts, each of which shall be an original, but all of which together shall constitute one and the same Agreement. The Parties agree that any xerographically or electronically reproduced copy of this agreement will have the same legal force and effect as any copy bearing original signatures of the Parties
- 2) This document constitutes the entire agreement between the parties and any prior or contemporaneous representations, either oral or written are hereby superseded. This Agreement may not be modified, amended, altered or extended except through a written amendment signed by each party.

IN WITNESS HEREOF, the parties hereto have executed this Agreement by properly authorized persons.

Memorandum Of Understanding

THIS MEMORANDUM OF UNDERSTANDING IS MADE AND EXECUTED AT PUNE ON
THIS 1st DAY OF JANUARY IN THE YEAR TWO THOUSAND AND TWENTY-THREE
(01/01/2023),

BETWEEN

**1. Pune District Education Associations College of Engineering, Manjari (BK),
Hadapsar, Pune-412307**

Hereinafter called and referred to as the "THE PARTY OF THE FIRST PART" (Which expression unless repugnant to the context or meaning thereof, shall be deemed to mean and include themselves their respective heirs, legal representatives, executors, administrators and assigns) OF THE FIRST PART.

AND

2. PHN Technology Private Ltd., a registered company under the provisions of the Companies Act 2013, having its office at Solitaire Business Hub E Wing 5010, F wing 5010 & 5020, 5th Floor Viman Nagar, Pune, Maharashtra 411014

Hereinafter called and referred to as the " THE PARTY OF THE SECOND PART " (which expression unless repugnant to the context or meaning thereof, shall be deemed to mean and include the said company, for the time being, and from time to time its respective heirs, legal representatives, executors, administrators and assigns) ... OF THE SECOND PART.

WHEREAS the party of the SECOND part is willing to provide Job Oriented Training Program for the next three years for free of cost;

AND WHEREAS on learning the intention of the party of the First Part, will fulfil the activities described in roles and responsibilities;

And Whereas On Learning The Intention Of The Party Of The First Part, Will Fulfil The Activities Described In Roles And Responsibilities;

Roles and Responsibilities

THE FIRST PART:

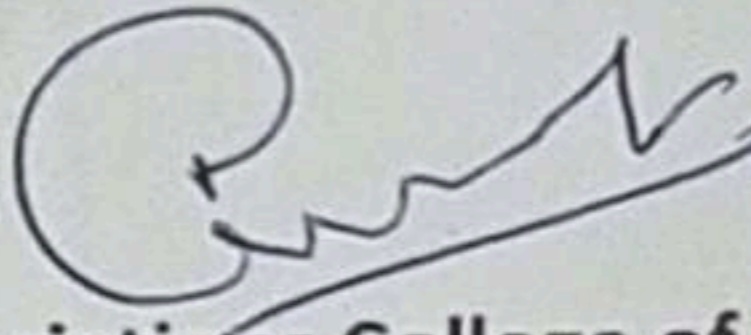

- THE FIRST PART will provide space (Hall/Classroom/Lab) to conduct the program and allow students to access Free Job Oriented Training Program facilities
- THE FIRST PART will dedicate staff members who will have to authority to coordinate with THE SECOND PART
- THE FIRST PART will have to conduct 8 -10 activities which will be provided by THE SECOND PART upon mutual understanding and agreement.

ACTIVITIES:

- Downloading Apps
- Taking Credit Cards: After the parent takes the Credit Card from any one of our banking partners, then his/her child will get the stationary free:
 - For 1 Credit Card, 1 set of stationaries will be provided free of cost.
 - For 2 Credit Cards, 2 sets of stationaries will be provided free of cost.

THE SECOND PART:

- Yearly 2 Career guidance webinars by IIT Graduates
- Yearly 2 Advanced technology training program/workshops
- Corporate readiness training
- Yearly 4 Webinars by Industry Experts
- One Industries expert Mentor will be provided to the college
- Internship to students as per the industries requirement
